

# Eliminate the busywork. Accelerate your workflows.

Harness the power of automation to unlock lab capacity, empower your experts, and finish digital investigations faster.

## The challenge

It's becoming impossible for digital forensics labs to keep up. Increasing data volumes, evidence complexity, resource constraints, and the fast-changing technology landscape, are forcing you to get more done with what you have.

With Magnet Automate, you can automate your forensic workflows and scale up your existing resources and processes to quickly complete digital investigations.

## Our solution

### Accelerate investigations

Increase the speed and efficiency of investigations by integrating your toolkit into streamlined, automated workflows. Keep your lab running 24/7/365, even when you aren't there.

### Maximize resources

Fully utilize your existing resources to automatically image, process, and create exports for multiple data sources in parallel.

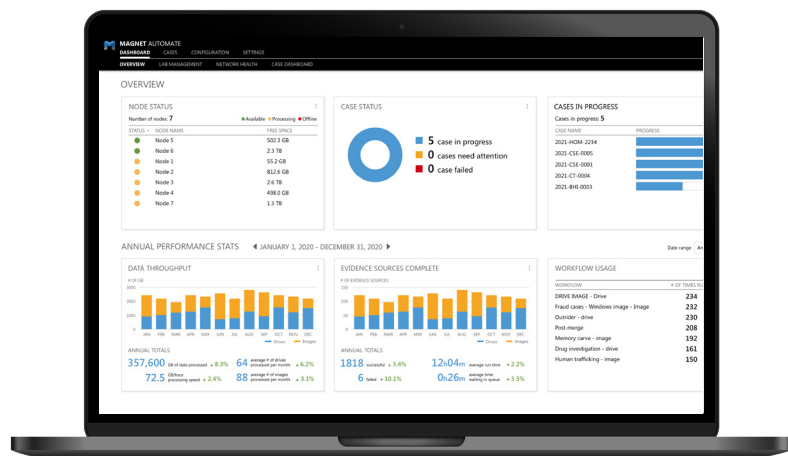

### Boost productivity

Do more with the resources you have. Let examiners focus on high-value tasks like deep dive analysis and let technology handle the rest.

“Because time-to-evidence is now guaranteed inside 48 hours, investigators can identify and act on relevant material quickly—examiners are freed from repetitive tasks, and our computing power is being utilized 24 hours a day, 7 days a week.”

## Key features

### **Automated workflows**

Automate's drag-and-drop workflow builder makes it easy to develop efficient, automated workflows across your entire forensic toolkit, customized for each case type. Automatically collect from remote endpoints and select cloud sources (Microsoft Office 365, OneDrive, SharePoint, and Teams.)

### **Parallel processing**

Automate keeps your lab running 24/7/365, even when you aren't there. Automatically image, process, and create exports for multiple items of evidence in parallel, scaling up your existing resources to complete your investigations even faster.

### **Unlimited integrations**

Seamlessly integrate almost any tool from your toolkit, including forensic solutions, cybersecurity (XDR/EDR, SIEM, SOAR), mobile acquisition tools such as Magnet Graykey or Magnet Verakey, and business systems tools. Connect your tools via several methods, such as REST API, custom scripts, watch folders, and workflow plugins. For increased flexibility, you can also integrate your custom scripts

### **Lab insights**

Clear, visual dashboards help you quickly assess lab infrastructure health and provide key insights for smarter resourcing decisions. Easily report to management on the value of your lab investments by tracking overall throughput and efficiency metrics.

### **Ensure case quality**

Easily adhere to standard processes by empowering your experts to design approved workflows for each case type. Forensic technicians or junior members of the team can then kick off the right workflow from a dropdown menu while experts focus their time on analysis.

## Leverage the power of Magnet Axiom + Axiom Cyber

The processing engine in Axiom and Axiom Cyber powers Automate's processing. After automated workflows process the data, automatically export evidence as a Magnet Forensics case file to examine with Axiom or Axiom Cyber.

Benefit from the deep parsing and carving capabilities in Axiom or Axiom Cyber when you analyze the results and ensure you get the most complete view of the case.
