

# Bring your teams and their digital evidence together

Securely collaborate on digital investigations from anywhere in the world.

## The challenge

Growing data volumes and a larger-than-ever remote workforce have made it more difficult to enable effective collaboration on digital evidence review. With Magnet Review, investigators and other stakeholders can be empowered to easily and securely collaborate and quickly find the evidence that matters.

## Our solution

### Share all your evidence

Combine digital evidence from all your sources in one case.

### Simplified evidence review

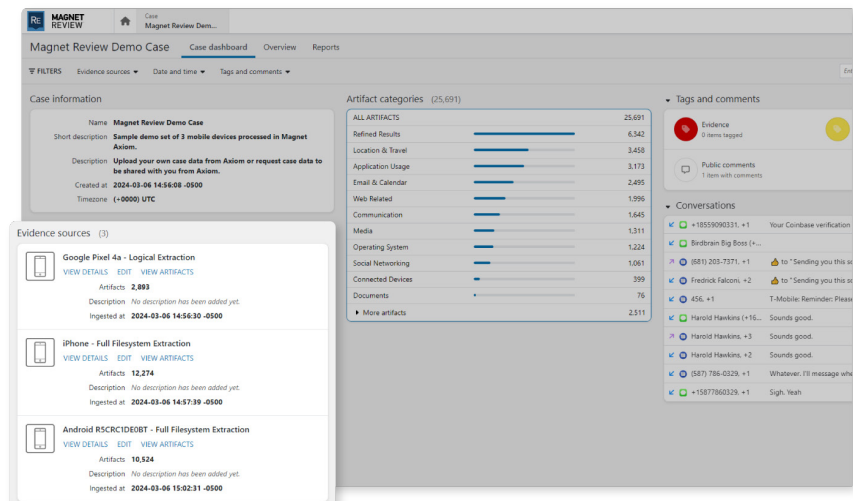

Enable stakeholders to quickly find the digital evidence they need to make their case.

### Collaborate in real-time

Empower your teams to work together on digital evidence review.

### Easy to understand reports

Effectively tell the full story of your evidence.

---

## Key features

### **Collaborate on evidence review from anywhere**

Review helps you get evidence into the hands of all your stakeholders quickly and easily, so they can work together to complete your investigations faster. Eliminate travel and shipping-related costs by providing secure remote access to case evidence from anywhere, anytime.

### **Quickly find the evidence that matters**

Review was purpose-built for non-technical users. They can easily browse, search, and filter evidence with an intuitive interface that works on any web browser. You can also add tags and comments to evidence items that other collaborators can instantly view and surface valuable insights with powerful analytics views to further accelerate evidence review.

### **Streamline evidence review across all your sources**

With Review, you can import evidence from Magnet Axiom, Magnet Axiom Cyber, Magnet Artifact IQ, and other digital forensic tools, such as XRY or UFED, so investigators can easily review all their evidence in one case file. Uniform reports can be created across your evidence sources to save time and eliminate the need to train reviewers on multiple tools.

### **Record and report on the full case history**

Maintain control over who has access to what data and when to reduce risk to your organization. Admins can apply flexible role-based access controls based on different user needs and manage permissions for each case individually, with audit logs to learn who did what and when.

### **Secure and scalable cloud deployment**

Review was designed with a cloud-first approach to help organizations easily provide secure, scalable access while ensuring data integrity.

---

## Magnet Forensics Product Integrations

Utilize the processing and analytics power of Axiom and Axiom Cyber to easily import computer, mobile, and cloud evidence into Review with just a few clicks. Combine with Magnet Automate to automatically export processed evidence directly into Review with no additional manual work required.

The Met is committed to being a leader in the digital transformation of policing. Our collaboration with Magnet Forensics and Microsoft aims to ensure that digital evidence critical to investigations is reviewed in a simple, timely, effective and secure manner to ensure justice is achieved.”
